Applicability of the Hybrid Information-Centric Networking Architecture
draft-muscariello-hicn-applicability-latest

Abstract

This document discusses the applicability of the Hybrid Information-Centric Networking (hICN) architecture by showing examples of the development of applications on top of hICN transport and the deployment of hICN routers in the IPv6 Internet. Among the many

Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of BCP 78 and BCP 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at https://datatracker.ietf.org/drafts/current/.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on 3 September 2020.

Table of Contents

1. Introduction

1.1. Notational Conventions

The words "MUST", "MUST NOT", "SHOULD", and "MAY" are used in this document. It's not shouting; when these words are capitalized, they have a special meaning as defined in [RFC2119].
